

Installing and using the SmartIPTV App

For Android TVs or Devices

Disclaimer: The application itself does not contain any channels. You will need to subscribe to a IPTV provider

Download the App

Android TV application version is now available in Google Play.

Follow this link <https://goo.gl/Np2njE> to install the app. If it's not compatible with your device in Google Play, it means your device is **not Android TV**.

Here are some examples of Android TVs:

- Philips powered by Android TV™
- Sharp AQUOS powered by Android TV™
- Sony BRAVIA powered by Android TV™

You can still try to install it on your device by downloading the latest **APK** presented below, but you should not expect it to work on just any **non-Android TV** set-top-box. **Android 5.0** is required.

APK v1.6.6 Download

<https://s iptv.eu/howto/android/files/SmartIPTV.apk>

Please also check Media formats and codecs, supported by Android platform. If your stream doesn't work in the app directly, it means it is not supported by native Android codecs, so you will have to use external app (check remote control commands below), which does.

Important: You need to install one of the media players available in Google Play to play videos in your playlist. Some examples are:

VLC <https://play.google.com/store/apps/details?id=org.videolan.vlc>

MX Player <https://play.google.com/store/apps/details?id=com.mxtech.videoplayer.ad>

The SmartIPTV app comes as a trial of 7 days as default. You will then need to buy the app at the cost of £4.99 (or the correct price at the time) in order to activate it by following the instructions below.

Or if you prefer we can also activate it for you for the same price.

Activating the App

The SmartIPTV app needs to be activated before 7 days otherwise you will lose the connection to the IPTV subscription.

To buy and activate the app visit <https://siptv.eu/activation/> and follow the instructions. You will see various options to pay, but to avoid delays we recommend to pay by Card or PayPal.

Note: Activating and paying for the app does not give you any IPTV channels. You still require an IPTV subscription.
